EDWARD GRANADOS

Junior Software Engineer · React · JavaScript · Full-Stack
Irvine, CA (open to remote, US) | 310.722.5816 | alexanders.edward@gmail.com | github.com/Edward-0528

SUMMARY

Software engineer who built, tested and shipped **Core+**, a React Native health app on the App Store and Google Play, and built **CareBridge**, a React + ASP.NET Core + SQL Server healthcare app designed around PHI. Works from evidence: instrument the app, read logs and funnel data, form a hypothesis, then ship a small, tested change and measure it. Eight years leading teams at T-Mobile built ownership and care with sensitive customer data.

TECHNICAL SKILLS

Frontend: React (hooks, Context, composition, state and props), React Query, Fluent UI, TypeScript, JavaScript (ES6+), HTML, CSS, accessible and responsive UI
Backend & Data: C#, ASP.NET Core Web API, Entity Framework Core, SQL Server, PostgreSQL / SQL (Row-Level Security, migrations), REST APIs
Testing & Delivery: xUnit, React Testing Library, Vitest, Node test runner, Git, GitHub Actions CI, EAS Build / Submit
Mobile & Tools: React Native, Swift, Kotlin, HealthKit, Health Connect, A/B testing, Claude Code (AI-assisted, human-reviewed)

SOFTWARE ENGINEERING EXPERIENCE

Core+ — Founder & Software Engineer **Jul 2025 – Present**
Health & fitness app on the App Store and Google Play · React Native, JavaScript, PostgreSQL, Swift, Kotlin

- Built the UI from **165 reusable React components** using hooks, Context-based state and shared design tokens, with accessibility labels and roles on interactive elements.
- **Unified Apple HealthKit and Android Health Connect** behind one cross-platform service; wrote native **Swift and Kotlin** modules and a SwiftUI widget fed by the React app.
- **Read the data before acting:** logs showed 30 of the first 40 accounts inactive after onboarding. Traced it to a measurement gap, not churn (core actions emitted no events; scan logs had no user ID), then added user-linked events at the telemetry layer so every scan path was covered, plus SQL funnel queries.
- Ran **A/B tests on paywall variants** (hard vs. soft gate) with per-variant analytics, an exit survey and an offer limited to the variant where it applied; every rule is covered by unit tests.
- **Protected sensitive health data** with PostgreSQL Row-Level Security, encrypted on-device storage, biometric lock and a full account-deletion flow; tests run on synthetic fixtures, never real user records.
- Wrote **525 automated tests**; shipped 80+ store releases. Fixed upgrade regressions (React Native 0.86, Expo SDK 57) such as an Android launch crash and a paywall reporting successful purchases as failures.

CareBridge — Healthcare Care-Coordination App **Oct 2026**
github.com/Edward-0528/CareBridge · React, TypeScript, C#, ASP.NET Core Web API, EF Core, SQL Server

- Built a full-stack app for case managers: **React + TypeScript** (React Query, Fluent UI) on an **ASP.NET Core Web API in C#**, with **EF Core migrations for SQL Server**; synthetic seed data only.
- **Designed for PHI:** list endpoints return masked DOB and MRN, every full-record read writes an audit entry, and logs carry IDs only.
- Wrote **43 tests** (xUnit integration tests against the running API, plus React Testing Library); GitHub Actions runs the API suite on SQLite and SQL Server 2022. Accessible forms with linked errors and focus management.

Cosmic Cuties — Mobile Puzzle Game **Oct 2026 – Present**
Beta on TestFlight · Flutter / Dart, Supabase, GitHub Actions, Codemagic

- CI runs static analysis and **840+ tests on every push and pull request**; merges to main ship to TestFlight automatically.
- **Tested design decisions with data:** wrote a human-like bot to compare board shapes, then auto-tuned 500 levels to a target difficulty curve (493 of 500 within 10 points); tests fail if a change makes a level unwinnable.

PROFESSIONAL EXPERIENCE

T-Mobile — Store Manager **2018 – Present**

- Lead a retail team of 15+, coaching through regular feedback and running the store against weekly KPI targets.
- Enforce identity-verification and customer-privacy procedures for account data, the same discipline needed when handling PHI.

CERTIFICATIONS

- Meta Front-End Developer (React), Back-End Developer and Android Developer Professional Certificates (2025) · Google AI Essentials; Google Cloud Intro to Generative AI (2026)
